

The Lomond Press

VOL. 2. NO 30

LOMOND, ALBERTA, FRIDAY, JANUARY 11, 1918.

\$1.00 PER YEAR.

LOCALETS

Albert Finley and Art. Charters have been instructed to report for service on Jan. 17th.

There will be a dance in Paulson's Hall, Travers, on Jan. 18th.

Dick Neil is away to Calgary.

Mr. and Mrs. Orbie Baker returned last Friday from a little trip to the Hat.

Our chinook has come to a very decided end, emphatically emphasized by a 30-below temperature this morning.

Born—to Mr. and Mrs. Hugh Brown, of Wheat Centre on Jan. 4th, a son—a little unionist.

Messrs. Mapson and Olson have purchased the Holo Wogsberg dray.

Jas. Marshall took in the boxing bout at Lethbridge on Wednesday.

The Massey-Harris agency unloaded a car of sleighs and drills this week.

The Press office has been the scene of a siege of school book auditing since the first of the new year.

Rev. Irwin is commencing a series of studies on "The Meaning of Life" each Sunday evening at 7:30. The series will be held in the I.O.O.F. Hall during the cold weather. People will do well to start off the year by getting interested in these studies. It would do none of us any harm to do some deep thinking on the problems of life.

LOST—A small balloon-shaped watch fob with red stone setting. Finder will be suitably rewarded if same is left at The Press office.

Mr. and Mrs. Walter Marr of Pincher Creek, Mr. and Mrs. Wm. Farrel and Mrs. Smith Farrel of Blackie, were guests of Mr. and Mrs. G. L. Farrel over the week end.

United States food administrators predict lower prices on sugar.

H. Smith was in Calgary over day.

It is said that the South Alberta Land Co. will put their land in the vicinity of Vauxhall and Ronolane on the market this spring.

The Bow-City village charter has been cancelled by the Department of Municipal Affairs, Edmonton.

The local committee in charge of the Halifax Relief Fund has realized to date about \$450. Mr. St. Johns is still open to receive subscriptions at the bank and those who have promised and failed to pay up will do well to do so at once. If someone in the surrounding communities would circulate a list among their neighbors and report their returns to the treasurer it would greatly augment the fund. Too much help cannot be given to the countless stricken families in this great disaster.

The Press would call the attention of the readers at large and school teachers in particular to the article headed "No Honor in His Own Country". It contains a fund of general information not picked up in the every day reading.

Since the weather is so changeable we have concluded there must be a woman on the job.

"NO HONOR IN HIS OWN COUNTRY"

(BY FOWNESS R. LEIGH, PH.D., LL.D., F.S.Sc., PROFESSOR OF CHEMISTRY, GEORGETOWN COLLEGE, KENTUCKY.)

During the last few months I have often heard the Germans arraigned as blatant, boorish and barbaric, yet in nearly every case the speakers suffixed to their invectives such an expression as "but when it comes to brains you will have to hand it to them; they have made science."

Why hand it to them?

What epoch-making invention or discovery is of German origin except a rubber stamp on which is inscribed "Made in Germany"? Their scientists have kicked up a fair amount of spray as they gamboled in their pool, but the world has yet to hear a mighty Teutonic splash.

Time and again, French, English, American, Spanish and Italian inventors and discoverers have sent tidal waves around the globe which inundated savage customs and buoyed civilization ever onward.

In my indictment of the haughty Prussians and their kindred I desire at the outset to pay a tribute to the six hundred thousand Jews of practically pure Hebraic lineage sojourning by chance among them. From this alien race, with a patient and puissant intellect, the rich heritage of unnumbered centuries, has come a great part of the arts, letters and science that have been erroneously attributed to the Prussians.

The Jews of German residence have excited us not only to liberal praise, but to enthusiasm by their histrionic and esthetic art. Their science has helped to number the stars in their courses, to assuage the pain of the afflicted, to mitigate the toil of the laborer, to give an abundance of necessity and a moiety of luxuries to the common people. Their literature has delighted and instructed all classes of mankind. Their melody and song have enraptured the world. While the tribe of native Germans has been bragging, boasting and blustering, the quiet Jew has brought his versatile and resourceful mind to bear upon the works of God with the same philosophic acumen with which his ancient ancestors pursued the works of God.

During the past century the Jew resided in Germany, while still keeping one eye on heaven, has cast the other upon the earth and found many a gift for science. His achievements have been noteworthy in research, discovery and invention, in commerce, trade and finance. The Jews in Germany have been granted an insignificant voice in political affairs by the native Teutons. Therefore they are not culpable for the hydra-headed German state. Thousands of them have shown their apathy for the militaristic government by seeking homes in democratic America, where they have gloriously surpassed those of their race who remained in the land of the tyrannical Hohenzollern, proving conclusively that even a people so richly endowed as the Jews must have a

republican form of government to reach his full stature. If the intellectual triumph and scientific achievement of the Jews were removed from the boasted grandeur of Germany, what would be left? Even if we generously concede so her the praise due to the Jews, she will still fail woefully when compared to the other leading nations of the earth.

Let us now prove this statement.

STEAM ENGINE IS ENGLISH

The steam engine has been called the greatest of inventions. It broke the shackles from slaves, it mingled the marts of the world, it made neighbors of the antipodes. Newcomb, a native of Devonshire, obtained the patent for the first partially successful steam engine. Watt, a Scotchman perfected it. Carnot, Murdoch and Trevithick brought forward the locomotive, not on German soil. Stephenson, an Englishman, was the first to supply the locomotive steam engine to railways for passenger traffic. France, England and America not only equipped it with the pressure gauge, the whistle and the safety valve, but also applied it to navigation. When all had been completed, Germany pulled the whistle and shouted "Hoek der Kaiser!" and tagged it "Made in Germany!"

The telegraph which brings us the daily history of world, was invented by an American, Professor Morse, who also suggested the Atlantic cable, which was subsequently laid by that American merchant-scientist, Cyrus Field, assisted in "mooring the new world alongside the old" by Lord Kelvin, the prince of physicists, a British scientist. It was the English who in 1802 conceived the idea of the Canada-Australia cable, bringing the northern hemisphere and the southern into a single point, and it was America that in the following year projected the Pacific cable, making the far east the near east. Graham Bell, the chief inventor of the telephone, was born in Scotland and grew to fame in America. A young Italian, Marconi, gave wireless telegraphy to the world, and Edison presented his wonderful quadruplex telegraphy. The house of Hohenzollern has made great use of these inventions by telling Great Britain, America and Italy in arrogant verbiage what the Naterland has done for the benighted peoples of the earth.

HARVESTER IS AMERICAN

Cyrus McCormick, a native of West Virginia, produced the reaping machine which harvests the food of the world. J. F. Appleby, also an American, contributed the automatic grain binder. Meikle of England brought forth the threshing machine. The inventor of the roller flour mill and the deviser of the middling purifier for flour were both Americans. Along came H. Mege of France and, having made oleomargarine, spread his cheap and nutritious butter upon the bread of the poor.

(continued on page four)

Roses are red, and so's my nose, oh my!
Violets are blue, and so am I,
Fer th' whole of Canady has gone dry.
—KIL MARNOCK.

I. O. O. F Installation

Installation of the 1918 officers was effected in the Lomond I.O.O.F. lodge on Thursday, D.D.G.M. Tibert, acting-Grand Secretary H. E. Elves, acting-Grand Treasurer Thos. Farrand, acting-Grand Marshall W. J. Clement, taking charge of the ceremonies. The officers are as follows:

N. G., Ashly Hanna.
I. P. G., W. M. Armstrong.
V. G., Jackie Stewart.
Treas., W. B. Manning.
Fin. Sec., Verne Davies.
Rec. Sec., Frank Connolly.
Warden, Robt. Moir.
Conductor, S. A. Beckett.
Chaplain, Rev. Irwin.
R.S.-N.G., C. R. Adams.
L.S.-N.G., John Grant.
R.S.-V.G., H. Thompson.
L.S.-V.G., Geo. Hedges.
R.S.S., Dr. Walkey.
L.S.S., Andrew W. Tulloch.
I. G., W. A. Teskey.
O. G., H. Finley.

Art. Charters, who is leaving for active service overseas, was presented with a signet ring by the Lomond brethren and the occasion was finished up socially by smoking a couple of boxes of cigars.

Guy W. Johnson to Speak at Farmers Meeting

Notices have been issued calling the annual general meeting of the shareholders of the Associated Farmers Limited to be held in the I.O.O.F. Hall on the afternoon of Wednesday, Jan. 16th., at two o'clock.

Guy W. Johnson, late of the Alberta Farmers Co-Operative Elevator Co. and now manager of the Vulcan Co-Operative is expected to be present and give an address.

Dies From Pneumonia

Ray Recor, the twelve-year-old son of Mr. and Mrs. Merton Recor, died early Saturday morning from an attack of pneumonia. The little lad was taken ill the day after Christmas. The mild weather coupled with heart weakness made impossible the successful combat of the disease with medical skill. Interment was made in the Lomond cemetery on Monday.

The sympathy of the community is extended to the parents in their time of bereavement.

A Concert Coming

The Badger Lake amateur dramatists have been invited to stage in Lomond the comedy sketch "A White Shawl", which was given in the First Chance School on Dec. 7, with considerable success. As this will provide but half of an evening's entertainment a good musical program is being rehearsed for the occasion. Watch for announcement of the date.

Card of Thanks

Mr. and Mrs. Merton Recor desire to express their thanks for the many kindnesses and the sympathy extended to them at the time of their recent bereavement.

RAE L. KING, PROP

LOMOND, ALBERTA, Jan. 11, 1918

A Clear Conscience.

Mr. Cline, C.P.R. paymaster, came along last Friday to learn why The Press was so profusely condemnatory of the Lomond train service. We took from his remarks that the railway company was acting with a clear conscience. He maintained the service was commensurate with the revenue.

Mr. Cline is employed by the the C.P.R. and impresses us as a man well worth the salary he probably draws.

The Press will grant him his every argument but one; and will not concede that the company is giving this line a square deal until a passenger and mail accommodation is provided that will be scheduled and WILL ARRIVE in Lomond not later than six o'clock in the afternoon.

Eleven hours should be more than ample time to bring a train from Medicine Hat to Lomond when there is a space of sixty miles in clear track.

What Canada needs is a boost in railway commissioners, not in freight and passenger rates. The railways have already been given enough concessions in the curtailment of passenger service and increased demurrage rates and freight traffic—to say nothing of that old thorn, original subsidies—without further burdening the general public. Organized lobbyism of corporate institutions appears to invariably exert a hypnotic influence over government commissions and the welfare of the general public gets a secondary consideration.

ANNOUNCEMENT To Auto Owners

Mr. Homer King, recently of Bow Island, is taking charge of the repair department in the Central Garage. Mr. King is an experienced mechanic of high repute and will bring to the Central garage all that is desired in mechanical ability. It will be an aim to give a first-class service first to the Chevrolet and Dodge cars, but all work will be given thorough consideration. The accessory shelves will be found well supplied with a

LOMOND DISTRICT.

(copy arrived too late for last issue)

Order your yacht now while the season lasts. Boats to let—apply to Oscar Olson.

Pigs are dying almost every day. Who can solve the problem?

W. Ainley is out plastering Mr. McManus' house which he recently built.

Mr. Whitting, who returned from the Peace River country a few months ago, says that the well-spoken-of district does not appeal to him. He says that most of the settlers there have had to dig 300 feet only to find soda water. In the sloughs there (some of which never go dry) grows a poisonous plant which poisons the water so that 35 head of cattle have been known by Mr. Whitting to die an hour after drinking the water. He states further that intended settlers have to go forty miles back from the farthest railway point, but that Athabasca landing is a thriving little town.

We have every prospect of a good crop in this district next fall. The ground is literally saturated with the precious liquid and the farmer who has worked his summerfallow well will be proud this harvest.

Mr. Dobson has ordered a Kansas straw-spreader. He has been farming for 35 years now and this scheme of his, he thinks, is the sequel of western farming.

We congratulate Mr. and Mrs. Will Bensen on the arrival of a little rock picker. It would have been very convenient if the arrival had been previous to the stable building.

The Gordon Elliott family have opened the throttle for the slinging of paper and paste, accompanied by the generous use of elbow grease.

Abandon your cars when the tank calls for more gasoline, is the slogan these days. It causes some embarrassment when a man is left in a slough of unusual size, especially with a fair passenger, doesn't it Jack?

We naturally expect the formation of skating parties pretty soon now.

Bow City

(continued from last week)

The Christmas tree on Friday before Christmas proved a very enjoyable affair to the young and old. The boys and girls, in spite of little training, all did well. Santa Clause was on hand and I imagine he must have had on a different set of tires from what he started with three years ago. The lunch was splendid and the financial response good.

Mrs. Porteous has been stayinw with her daughter, Mrs. S. Armstrong, for the winter. Mrs. Porteous arrived just in time to miss a ride on the ferry and had to come over in John's punt. Mrs. Porteous is of the opinion that Bow City can furnish more thrills, as

well as chills, than any other city of its size in Canada.

A herd of antelope about three hundred strong, have been trying the pasture near here lately. A section of the herd, 124 in number, were near the Hall one morning. It looked as if this was the dancing portion of the herd and were just going home from a good time in the Hall.

If Bow City news has been scarce lately it is simply because traffic has been at a standstill between our burg and your town.

Roy Albertson celebrated Christmas week by going up to Calgary for appendicitis. He came through the operation successfully and by last accounts was doing nicely. We will be glad to see him around again.

Our Halifax fund started at the Christmas Tree entertainment amounted to \$160 cash.

**We Carry a Full Line of
High Grade Farm Machinery**

No Honor in His own Country

(continued from front page)

Thus has the world been fed. Eli Whitney of Massachusetts parentage, invented the cotton gin. Hargraves, an Englishman, made the spinning jenny. Arkwright, also English, supplied its deficiency with the famous spinning frame. The Englishman, Kay, introduced the fly-shuttle in weaving; Brunel, who devised the knitting machine; Cartwright, inventor of the power loom; and Mercer, who made mercerized cotton, were British subjects. To H. De Chardonnet of France are we indebted for the process of making artificial silk. Thus has the world been clothed, Germany included.

Although Germany is militaristic and worships at the shrine of Mars, what votive offering has she made to the god of war? It was not she who contributed gunpowder, percussion cap, nitroglycerine, explosive gelatine, dynamite, torpedo, shrapnel, spirally-grooved rifle barrel, automatic cannon, breech-loading rifle, magazine rifle, breech-loading ordnance, rebounding lock gun, disappearing gun carriages, gatling gun, revolver, maxlm silencer, hammerless gun, gunboat, ironclad batteries or ships, armor plate, nickel steel, revolving turret, submarine or airship.

BORROWED OTHER DEVICES

Since Germany borrowed her military appliances from other nations we are not surprised that she obtained her devices of prosperity from the same source. She did not produce the first aniline dye, vulcanized rubber, celluloid, portland cement, babbitt metal, liquid gasses, gas engine, water gas, barometer, artificial ice, pianoforte, barbed wire, cnt nails, plate glass, circular saw, band wood saw, cable car, electric car, sleeping car, air brake, automatic car coupler, calculating machine, cash register, steel pen, rotary dredge, stethoscope, passenger elevator, store cash carriers, linotype machines, bicycle, automobile, pneumatic tire, sewing machine, typewriter, planing machines, electro-plating, electric welding, multi-colored printing, steam plow, sulky plow, rotary disc cultivator, artificial limbs, life preserver, etc., ad infinitum.

The greatest thing that Germany has done is to falsely advertise herself as the light of the world. No son of hers invented the electric light, the calcium light, the mercury vapor light, the acetylene light, the kerosene light, the searchlight, the flashlight, the safety lamp, the candle dip, the safety match or the common friction match. America, France, England and other nations performed this task. The sun, moon and stars are the only lights left for Germany's contention, and according to the Mosaic account, the Lord and not the kaiser made and placed them in the firmament.

PHOTOGRAPHY

Louis Daguerre, a Frenchman, presented us with photography. Talbot, who made the first photo prints from paper negatives and who devised the reticulated screen for halftone, was an Englishman; so were Archer, who produced the Collodion process, and Melhiush, who introduced the photographic roll film, and Maddox, first to make use of the gelatine-bromide emulsion, the basis of our present rapid photography. Our own Edison brought forth the motion picture to instruct and interest the eye, and the phonograph to please and teach the ear. The Germans enjoy our reels and records, and,

HERE ARE THE Money :- Savers

We have a number of lines we intend to eliminate from our stock entirely. There we offer at prices unheard of in times like these. We offer them first to our customers at these prices and then the balance goes to a commission house or some place else to be disposed of. We intend to discontinue these lines, as our space is limited. We have no room for slow sellers. The low prices we offer on all our stock are based on quick returns.

BOYS' OVERCOATS

A great variety of styles to fit boys from 4 to 20 years of age. Can not give you a complete list, but the prices we offer are below manufacturers' cost.

Fur Robes, imitation buffalo, rubber interlined, and light-weight plush and wool rugs for autos or buggies. Prices below manufacturers' cost.

Blankets—Wool and wool mixtures. Some beautiful lines in Feather Comforters, also cotton in cheaper makes. Sheets in flannelettes and cotton. They all go the same road;

Here is a line of Ladies' Cashmere Hosiery. This line we bought at a very special price and offer to you at the great saving we made.

We have plenty of Pure Wool Underwear, Sweaters, Sox and Mackinaws on hand. Our price today is less than wholesale.

The Frank Brown Co.

Limited, Lomond.

lifting their steins, drink a prolonged toast to the achievements of the Vaterland, "Deutschland ueber Alles."

Galileo, who first saw the heavens with a telescope, was an Italian. The men who first saw the earth and its teeming life with a microscope were not of German origin. But the many telescopes and microscopes in our colleges being marked "Made in Germany" have led students to believe that these wonderful instruments were devised by German brains. The Germans are mechanical, not inventive.

By use of the compound microscope Pasteur, the French biologist, as early as 1859 demonstrated a connection between microscopic organisms and disease. This was nine years before Dr. Koch, the German bacteriologist, had graduated. In this connection the important antiseptic surgery of Dr. Lister of England should be recorded. Edward Jenner, the discoverer of vaccination, and Harvey, the discoverer of the circulation of the blood, were Englishmen. We have Caventon of France to thank for quinine, Guthrie of Scotland for chloroform, and his compatriot, Simpson, for introducing it into surgery. Wells of America for the use of nitrous oxide as an anesthetic, Sydenham of England for laudanum, Finson of Denmark for the use of ultra-violet rays in treating disease, Hill of America for successful operation on the heart, Laenne of France for the perfection of auscultation, America for osteopathy, France for care of defectives, Scotland for lip reading by the deaf, Denmark for the hydrostatic test, Orilla of Spain for toxicology, Malpighi of Italy for histological anatomy, Ruysch of Am-

sterdam for perfecting injection. American dentists excell all others. They are employed by many crowned heads—even the kaiser has his.

The Teutons have not shown the engineering skill of the French, who tut the Suez canal, or the Americans who joined the Atlantic and Pacific at Panama. The decimal or metric system, by which the Germans made their measurements, is a gift from France. The method by which they make their steel is that of Sir Henry Bessemer of England. Many of the fruits and vegetables, of which they eat an enormous quantity, were brought forth by our own peerless burbank. No wonder that the Germans can goose-step so high, for what else have they practised?

THESE MEN WERE NOT GERMAN

Lavosier, the father of modern chemistry, was a Frenchman, Linnaeus, the founder of botany, was of Swedish origin. To Hutton of England are we indebted for geology, to Manry of Virginia for the physiography of the sea, to Descartes of French parentage for analytical geometry, to Comte of France for sociology, to Germany for sauerkraut and pretzels. Even with the help of her gifted Jews Germany has not contributed anything like her quota toward the world's advancement. This is the fault of the German government and not of the Jews, for they have accomplished something in spite of the despot who rules them, Germany struts in borrowed plumage. She is neither resourceful nor original.

The world-wide benevolent and philanthropic work has not been inaugurated by the Germans. The Frenchman, Larrey, introduced the ambulance

for army use; his fellow-countryman, Baron Percy, added the stretcher-bearer, while Surgeon Milligen of the English army suggested the system now used in ambulance work. The Red Cross organization was founded by a French-Swiss physician at Geneva.

WHITE CROSS VS. IRON CROSS

The Blue Cross was established in England for the care of horses injured in battle. The White Cross, the single standard for moral conduct of men and women, was established by the Archbishop of Canterbury. The Iron Cross, established by Germany, is a sign of absolute militarism over humanitarianism. The German Cross symbolizes that might makes right.

Germany has made no Geographical discoveries of importance. Her neighbors have. What role did she play in discovering various portions of the new world? Did she establish colonies? I thank God she did not. Her sons did not compose the crew of Magellan's fleet, the first to circumnavigate the globe. A German did not discover the north pole, nor lead the way toward the south pole. It is high time to cease telling of Germany's achievements, unless one wishes to indulge in satire. The greatness of an invention or discovery is measured by its service to the great mass of mankind. Using this as a criterion, the Prussian stands well-nigh empty-handed before the world.

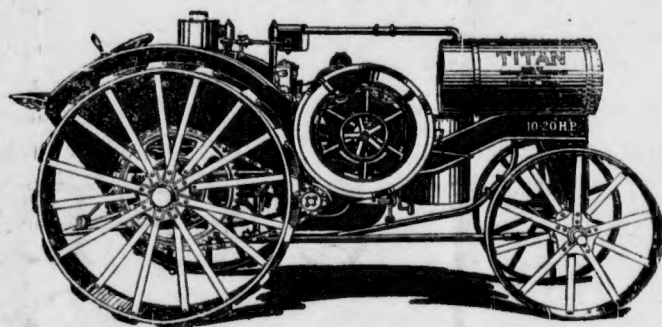

History and study will reveal that the world's greatest teacher, scientist, inventor, discoverer, statesman, general, philosopher, preacher, painter, poet, architect, novelist or singer was not "Made in Germany."

NOTICE TO THE PUBLIC

I have bought out the interest of Mr. J. D. Moran and will continue the business at the old stand on Center street, and wish to say that any farmer who intends buying an implement of any kind for the coming season will save himself money by buying now, as I have a good stock on hand. I can supply at the old price for cash for a short time. Below

are a few of the present prices:

A Car of Sawdust for Sale at Reasonable
Prices.

The Associated Farmers, Limited.

Brood Sows to Farmers at Cost.

In order to secure an increased production of bacon in Alberta, the Provincial Government is buying grade brood sows, which will be sold to farmers at prices prevailing at time of delivery, with one dollar added for service fee. These animals are being purchased at current prices in stock yards and the packing plants in Edmonton and Calgary. Especial care is exercised to select animals of good length and depth. Growthy but underfinished animals are the kind chosen. These will be bred between December 20th and January 10th, and repeated, if necessary, between January 11th and February 1st. All animals that repeat a second time also all that fail to come in season at all, will be discarded because of the lateness or uncertainty of the time when they will farrow.

A record will be kept of the male to which each sow is mated, and the date of same, in order to be able to inform the purchaser as to the time when, and the type of pig each will farrow.

Bours of Berkshire, Yorkshire, Duroc Jersey, Poland China, Hampshire and Tamworth breeding will be used.

Inquiries and applications should be addressed to the Live Stock Commissioner, Department of Agriculture, Edmonton.
